

RO3000® Series High Frequency Laminates

RO3003™, RO3006™ and RO3010™ Laminates

Features:	Benefits:
Low dielectric loss (RO3003™ laminates)	<ul style="list-style-type: none"> Laminates can be used in applications up to 30-40GHz.
Excellent mechanical properties versus temperature	<ul style="list-style-type: none"> Reliable stripline and multilayer boards constructions
Uniform mechanical properties for a range of dielectric constants.	<ul style="list-style-type: none"> Ideal for multilayer board designs with a range of dielectric constants. Suitable for use with epoxy glass multilayer board hybrid designs.
Stable dielectric constant versus temperature and frequency (RO3003 laminates)	<ul style="list-style-type: none"> Ideal for band pass filters, microstrip patch antennas, and voltage controlled oscillators.
Low in-plane expansion coefficient (matched to copper).	<ul style="list-style-type: none"> Allows for more reliable surface mounted assemblies Ideal for applications sensitive to temperature change Excellent dimensional stability.
Volume manufacturing process	<ul style="list-style-type: none"> Economical laminate pricing.
Typical Applications:	
<ul style="list-style-type: none"> Automotive collision avoidance systems 	<ul style="list-style-type: none"> Automotive global positioning satellite antennas
<ul style="list-style-type: none"> Cellular and pager telecommunications systems 	<ul style="list-style-type: none"> Patch antennas for wireless communications
<ul style="list-style-type: none"> Direct broadcast satellites 	<ul style="list-style-type: none"> Datalink on cable systems
<ul style="list-style-type: none"> Remote meter readers 	<ul style="list-style-type: none"> Power backplanes

RO3000® high frequency circuit materials are ceramic-filled PTFE composites intended for use in commercial microwave and RF applications. This family of products was designed to offer exceptional electrical and mechanical stability at competitive prices.

RO3000 series laminates are circuit materials with mechanical properties that are consistent regardless of the dielectric constant selected. This allows the designer to develop multilayer board designs that use different dielectric constant materials for individual layers, without encountering warpage or reliability problems.

The dielectric constant versus temperature of RO3000 series materials is very stable (Charts 1 and 2). These materials exhibit a coefficient of thermal expansion (CTE) in the X and Y axis of 17 ppm/°C. This expansion coefficient is matched to that of copper, which allows the material to exhibit excellent dimensional stability, with typical etch shrinkage (after etch and bake) of less than 0.5 mils per inch. The Z-axis CTE is 24 ppm/°C, which provides exceptional plated through-hole reliability, even in severe thermal environments.

RO3000 series laminates can be fabricated into printed circuit boards using standard PTFE circuit board processing techniques, with minor modifications as described in the application note "Fabrication Guidelines for RO3000 Series High Frequency Circuit Materials."

RO3000 laminates are manufactured under an ISO 9002 certified system.

The data in Chart 1 demonstrates the excellent stability of dielectric constant over temperature for RO3003 laminates, including the elimination of the step change in dielectric constant, which occurs near room temperature with PTFE glass materials.

Chart 1: RO3003 Laminate Dielectric Constant vs. Temperature

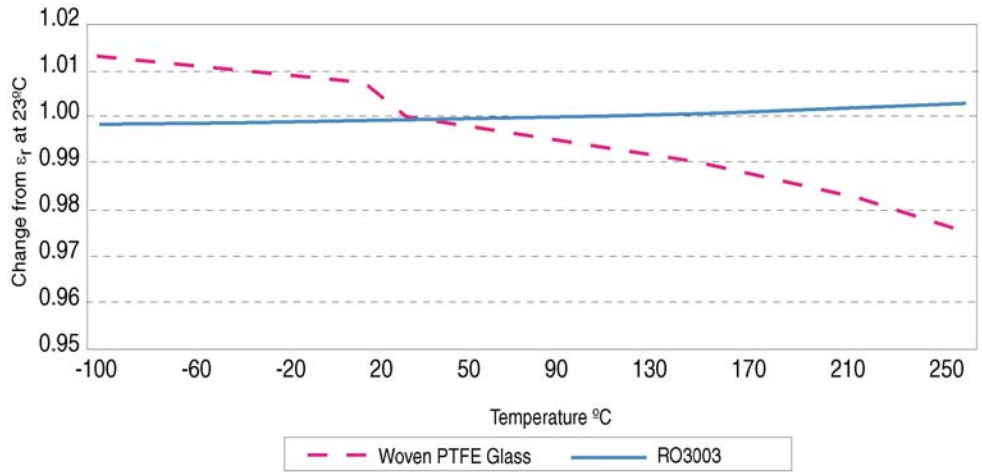

Chart 2: RO3006 and RO3010 Laminate Dielectric Constant vs. Temperature

The data in Chart 2 shows the change in dielectric constant vs. temperature for RO3006™ and RO3010™ laminates. These materials exhibit significant improvement in temperature stability of dielectric constant when compared to other high dielectric constant PTFE laminates.

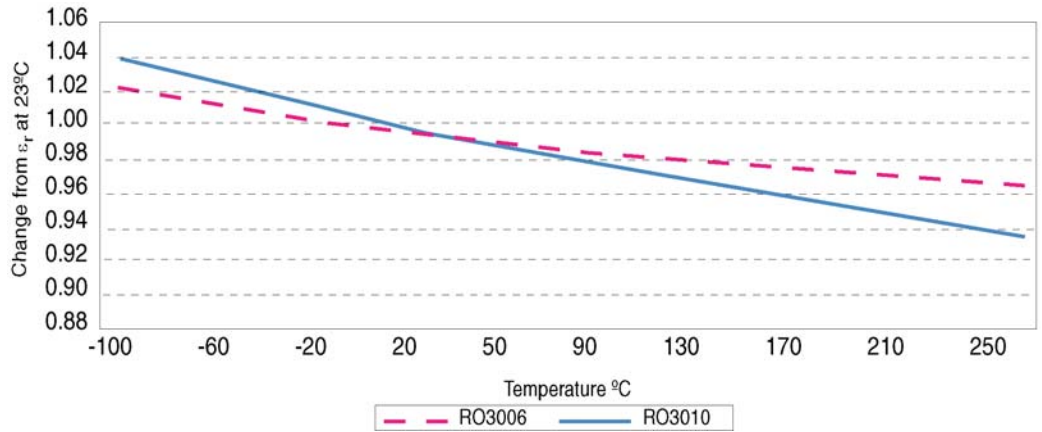

Chart 3: RO3000 Series Laminates Dielectric Constant vs. Frequency
IPC-TM-650 2.5.5.5.1

Chart 3 demonstrates the stability of dielectric constant for RO3000 series products over frequency. This stability simplifies the design of broadband components as well as allowing the materials to be used in a wide range of applications over a very broad range of frequencies.

The data in Charts 1, 2 and 3 was produced using a modified IPC-TM-650, 2.5.5.5 method. For additional information, request Rogers' T.R. 5156 and T.M. 4924.

Property	Typical Value ⁽¹⁾			Direction	Unit	Condition	Test Method
	RO3003	RO3006	RO3010				
Dielectric Constant, ϵ_r <i>Process</i>	3.00 ± 0.04	6.15 ± 0.15	10.2 ± 0.30	Z	-	10 GHz 23°C	IPC-TM-650 2.5.5.5 Clamped Stripline
⁽²⁾ Dielectric Constant, ϵ_r <i>Design</i>	3.00	6.50	11.20	Z	-	8 GHz - 40 GHz	Differential Phase Length Method
Dissipation Factor, tan δ	0.0011	0.0020	0.0022	Z	-	10 GHz 23°C	IPC-TM-650 2.5.5.5
